Art Unit: 1774

Claims 1-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over either of the patents to Motoda et al. (EP 0 587 139 or JP 06-206376).

These patents teach thermal recording material having a protective layer over a thermal recording layer. Since the protective layers employ the same materials (i.e., a pigment and core/shell type water dispersible resin) preferred by applicants, it is inherent that the prior art protective layers perform in the same manner as claimed by applicants. The experimental modification of this prior art in order to ascertain optimum operating conditions fails to render applicants' claims patentable in the absence of unexpected results.

A handwritten signature in black ink, appearing to read "Bruce Hess", with a stylized flourish at the end.
